Nanopublication — Financial axiomatics, Marx's falling profit rate, and the Lacanian subject

by Arnaud Quercy

This is a political-economic and psychoanalytic essay on financial capitalism, Deleuze-Guattari's axiomatic, Marx's falling rate of profit, and Lacanian subjectivity — it concerns no idea-to-form making, no emitter/receiver, no codex, no artist, and any surface rhyme with the framework's own vocabulary (flows, deterritorialization-adjacent terms) would be borrowing the source's philosophical authority rather than testing the framework's actual claims.

DECLINED — NO-PURCHASE [1]

PROPOSITIONAL GRID [2]

Read this grid. "Not evaluated" does **not** mean the source has nothing to say about that proposition. It means **the reading did not instruct it**. That is not a result, and it counts in no denominator. A silence, by contrast, is a finding: the reading touched the proposition without concluding, or noted its absence itself.

Not evaluated (37) — P1, P2, P3, P3a, P4, P5, P6, P7, P8, P9, P10, P11, P12, P13, P14, P14a, P14b, P15, P16, P16a, P17, P18, P18a, P19, P19a, P20, P21, P22, P23, P24, P25, P26, P27, P28, P29, P30, P31

Overall verdict: DECLINED:no-purchase — taxonomy of the August 2026 pass, predating the move to relational verdicts. Kept as metadata: the gap between the two forms is data, not residue. This reading's judgement is in the grid above.

FIRST PASS — KEPT AS WRITTEN

Reading produced by the T50 RSS pass, before the boundary lens. It is reproduced UNCORRECTED. Keeping it is the point: without it, a changed title is just a changed title — with it, what the second pass refused becomes legible.

Title it carried : « Deleuze, Guattari, and the Axiomatics of Algorithmic Dilution »

This essay reads contemporary financial-algorithmic systems through Deleuze and Guattari's concept of the axiom — a rule that generates infinite variations without changing its fundamental structure. The ideamorphic resonance: financial axiomatics function as a CODEX that constrains all emission within its logic, producing maximum output (capital flows, data generation, AI expansion) while minimizing genuine diffraction. Every transaction, every algorithmic decision, every credit expansion is a variation on the same axiom — not creation, but replication at scale. The 'burning system' is the dilution crisis made structural: the axiom rewards acceleration and recognition (more credit, more data, more models) while systematically crushing the gaps where alternative diffractions could emerge. The system IS the platform; resistance requires stepping outside the axiom entirely.
