Nanopublication — Whether Knowledge Survives Deduction: Closure, Sensitivity, and Warrant

by Arnaud Quercy

This is a technical survey of epistemic closure in analytic epistemology (knowledge/justification under deductive implication, sensitivity, safety, transmission of warrant) — a domain of logical and evidential relations between beliefs that the ideamorphism framework (emission, diffraction, codex, reception of creative works) has no vocabulary for and makes no claims about.

DECLINED — NO-PURCHASE [1]

PROPOSITIONAL GRID [2]

Read this grid. "Not evaluated" does **not** mean the source has nothing to say about that proposition. It means **the reading did not instruct it**. That is not a result, and it counts in no denominator. A silence, by contrast, is a finding: the reading touched the proposition without concluding, or noted its absence itself.

Not evaluated (37) — P1, P2, P3, P3a, P4, P5, P6, P7, P8, P9, P10, P11, P12, P13, P14, P14a, P14b, P15, P16, P16a, P17, P18, P18a, P19, P19a, P20, P21, P22, P23, P24, P25, P26, P27, P28, P29, P30, P31

Overall verdict: DECLINED:no-purchase — taxonomy of the August 2026 pass, predating the move to relational verdicts. Kept as metadata: the gap between the two forms is data, not residue. This reading's judgement is in the grid above.
